

FLEMING MICRON

The MINI Excavator with MAXI performance

The Micron packs the quality, strength and experience from Fleming tractor mounted excavators into a compact versatile digger. Small enough to fit through 0.70m doorways yet with power to dig down 0.63m effortlessly.

The Micron can be manoeuvred into confined areas that large excavators cannot reach and dig what would otherwise have to be done by hand with pick and shovel.

On many sites excavators are hired in on a daily basis but in most cases are never fully utilized all day. Micron is economical to run and can be operated by inexperienced personnel whenever needed. The saving on hire costs can pay for the Micron in weeks — a look at your recent hire bills should convince you.

Micron is quickly and easily loaded for transport by trailer or light van and once on site it can be 'walked' around under its own power. The mobility and high output of such a small machine make it the ideal tool for builders, plant hire, municipal services, pipe and cable laying, landscaping, nurseries, golf courses, estate maintenance and farmers.
