ON ROAD TOWING

Hydrostatic transmission enables the operator to drive around the site and travel on road where hills and gradients are easily negotiated.

Towing mobility is a feature of this machine. It can be quickly converted to on road self trailing at a speed of 45mph

★ **ROAD SURFACE PROTECTION** - if the machine is kept hitched to the towing vehicle, the anchorage stops forward movement, and rubber feet attached to the stabilizers protect the road surface

★ **CHANGEABLE BUCKET TEETH** - made of high quality forged steel with a piercing shape, very hard wearing

★ **EASY TOWING** - the machine can be towed by an average size car or truck, and when removed can be easily manoeuvred by hand

ANCILLARY EQUIPMENT

THE OPTIONAL H.P.T.O. CONNECTIONS ENABLE YOU TO POWER A RANGE OF HYDRAULICALLY OPERATED IMPLEMENTS. THESE INCLUDE BREAKERS, CIRCULAR AND CHAINSAWS, DRILLS, POLE HOLE BORERS, BRUSHERS, WATERPUMPS, PRUNERS ETC
